Tanalised What is it ?

Treatment is carried out by impregnation of the timber, under vacuum and pressure.

After treatment and re-drying the tanalised preservative becomes substantially part of the cellular structure of the timber. It can not be removed by weathering, rain, wetting, soaking or scrubbing. The treatment can never be washed out.

Dry Tanalised treated timber can and

5ft x 4ft with integral floor

Recyclable

DOUBLE-WALL CONSTRUCTION

Designed for extra strength and durability, two layers provides reliable protection for valuable tools, landscaping materials, equipment and more.

ALL-WEATHER DURABILITY

Dent and leak resistant sheds and boxes are designed to stand up to harsh weather conditions and stay looking good, year after year.

£739.00

5ft x 6ft with integral floor

£625.00

Sliding Lid 5ft x 6ft 6" with integral floor

Tanalised Treated Timber

PRESERVATIVE TREATMENT PROCESS

What is it ?

Treated timber is highly versatile. It is used extensively both inside and outside houses, commercial buildings, in landscaping and garden buildings.

Treatment is carried out by impregnation of the timber, under vacuum and pressure. After treatment and re-drying the tanalised preservative becomes substantially part of the cellular structure of the timber. It can not be removed by weathering, rain, wetting, soaking or scrubbing. The treatment can never be washed out.

Painting. Staining. Weathering. Dry Tanalised treated timber **should** and can be painted or stained in the same manner as untreated timber.
