Nominal) Sizes are before machining. (Finished) Sizes are after machining.

**Tanalised What is it ?**

Treatment is carried out by impregnation of the timber, under vacuum and pressure.

After treatment and re-drying the tanalised preservative becomes substantially part of the cellular structure of the timber. It can not be removed by weathering, rain, wetting, soaking or scrubbing. The treatment can never be washed out.

Dry Tanalised treated timber can and

## Tanalised Treated Timber

### PRESERVATIVE TREATMENT PROCESS

### What is it ?

Treated timber is highly versatile. It is used extensively both inside and outside houses, commercial buildings, in landscaping and garden buildings.

Treatment is carried out by impregnation of the timber, under vacuum and pressure. After treatment and re-drying the tanalised preservative becomes substantially part of the cellular structure of the timber. It can not be removed by weathering, rain, wetting, soaking or scrubbing. The treatment can never be washed out.

**Painting. Staining. Weathering.** Dry Tanalised treated timber **should** and can be painted or stained in the same manner as untreated timber.
